● Affordable accessories

The ZMRG001 and ZMRG002 are dome accessories perfectly suited for the LMRX ring light. This accessory can convert the diffuse ring light into a highly homogeneous dome light, perfect for illuminating shiny surfaces and inspecting texture changes on surfaces, such as laser engraved code. Thanks to hole aperture adapters, the diameter of the camera hole at the top of the dome can be reduced to minimize dark spots on any highly shiny surfaces. The hole aperture adapters come as standard with any dome accessory. The accessories come with integrated magnetic mounting, so they can be easily attached and removed. Once the final installation has been decided, the accessory can be screwed in place by 4× M3 socket screws which are also included in the scope of delivery.
