Housing Material

Plastic, PMMA

● Affordable accessories

ZMRG005 and ZMRG006 are darkfield accessories that are perfectly suited to the LMRX ring light. This accessory allows the diffuse ring light to be converted into a very homogeneous light with a low angle of incidence (60°), perfect for illuminating glossy surfaces and for examining details. This darkfield accessory operates at a working distance of 1 mm to 500 mm, depending on the object being examined.
